Leaseweb Global · Amsterdam, Netherlands

Re: Application for Agile Team Manager (Product Engineering)

Dear Hiring Team at Leaseweb,

Your Agile Team Manager role reads like a description of the work I most enjoy: keeping a team of talented engineers motivated and on track, taking **real accountability for the team's performance and results**, and coaching people on the Scrum way of working while staying close enough to the technology to help get the job done. After thirteen years leading Agile delivery inside regulated, engineering-driven organisations, I would be delighted to bring that to Leaseweb's Product Engineering teams.

Most of my career has been spent doing exactly what this role asks for, in remote-first, multi-country teams:

- **Developing, coaching and mentoring engineers:** at KBC I coached data-engineering, data-science and platform squads to a genuinely higher maturity level, and at iostoring I built an Agile Centre of Excellence and coach-the-coach structure from scratch.
- **People management and performance:** I led delivery and day-to-day management for a 50+ person onshore-offshore organisation, owning team health, growth conversations and the difficult prioritisation calls.
- **Facilitating Scrum and raising maturity:** as a SAFe Scrum Master (SSM), CSPO and ICAgile Certified Agile Coach (ICP-ACC / ICP-ENT), I run Scrum events and agile practices as a servant leader, not an administrator.
- **Partnering with the Product Owner:** I have been a Product Owner myself (a Carbon-Zero data platform on Google Cloud), so I team up naturally with POs to validate roadmaps with business stakeholders.
- **Transparency to the organisation:** I gave every SteerCo a clear read on delivery health with concrete mitigations, so surprises were rare and trust was high.

Leaseweb's world of dedicated servers, cloud, CDN and APIs is one I can engage with technically. I have worked hands-on across **cloud platforms (GCP, AWS), CI/CD, DevOps and microservices**, and I am comfortable being "willing to have technical involvement to support the team getting the job done." I also care deeply about the human side of high performance, enough that I research and publish my own **Human Agile Model** on building strong teams without burning people out.

On practicalities: **my relocation to the Netherlands is already decided**. My wife is beginning an engineering doctorate at the **University of Twente**, so we are moving as a family and I am committed to being based in the Netherlands long term. Leaseweb's remote-first, hybrid model with the Amsterdam HQ fits that perfectly, and I am fully available for on-site collaboration and the in-person team meet-ups, without the usual uncertainty over whether a candidate will actually make the move.

I would welcome the chance to talk about how I can help your teams do their best work. Thank you for considering my application, and I would be glad to meet in Amsterdam or online.

Kind regards,

Anjish Bhondwe
