Hiring Team

Re: Project Manager – Software Delivery (Remote)

Dear Hiring Team,

I am applying for the Project Manager role. I am an **immediate joiner**, and I am relocating to the Netherlands because my wife is beginning her PhD there. A fully remote setup with international clients fits how I already work, and I am ready to start without delay.

This role matches the way I like to work: lead software projects from discovery through delivery, stay close to clients, and keep business goals and product direction in view at every stage. I am comfortable helping clients shape ideas, challenge assumptions, and make clear decisions on scope, timeline and value, while coordinating developers, designers and stakeholders with transparent reporting.

At KBC in Brussels and Leuven I managed delivery across data, platform and product teams, kept plans and priorities aligned with business outcomes, removed blockers, and gave stakeholders a clear read on progress, risks and trade-offs. As Product Owner and Manager for Uplight's Carbon Zero product on GCP, I owned roadmap, backlog priorities and release decisions with a remote engineering team, so features landed with real product value, not only completed tickets. I use Agile in a practical way: ceremonies when they help, continuous improvement when flow slows, and Lean scope control when budget and timelines are tight.

I also enjoy the front end of the sales and discovery cycle. As a founding director at iostring I regularly join senior engineers in presales and discovery: understand the client problem, shape scope, flag risks and dependencies, contribute to estimation, and help the team enter delivery with a shared plan. Tools such as Jira and Slack are part of my daily rhythm for plans, backlogs and client communication.

I would welcome a conversation about how I can own project outcomes for your clients and help projects move with clarity from the first discovery call through release. I can start immediately.

Yours sincerely,

Anjish Bhondwe
