Re: Moody's RAY / RCO Functional Consultant · Singapore

Dear Sibani,

I am applying for the Moody's RAY / RCO Functional Consultant role in Singapore. I am based in India and can join immediately.

I currently work as a Consultant for a financial-services client at iostring. My day-to-day is business analysis and functional analysis on Moody's RiskAuthority (RAY) for liquidity risk related projects, plus credit risk data mapping and reconciliation support. I gather requirements, write functional specs, support SIT/UAT and work with Risk and IT. I am building hands-on RAY experience on live liquidity risk work; I am not positioning myself as a product expert.

At KBC I led Liquidity Reporting delivery in a multi-country banking tribe under Basel IV and AnaCredit. Earlier at Credit Suisse and HSBC I worked credit risk, regulatory reporting and risk-data reconciliation. That path fits a Singapore role where you need someone who can analyse, document and support Moody's RAY liquidity risk delivery with banking stakeholders.

I am ready to relocate and start immediately. Happy to share more detail on a short call. CV attached.

Yours sincerely,

Anjish Bhondwe
