Itineris

Re: Agile delivery / way of working for an AI-first engineering team

Dear Itineris Hiring Team,

I am applying because this role is exactly the work I want next: build a pragmatic agile model for an AI-first engineering team, keep sprint outcomes real, and scale that way of working to distributed and India-based contributors. "Together goes a long way" fits how I already work with Product, engineering and customer-facing leads.

At KBC I owned agile cadence across multi-country squads, including India partners: sprint goals, backlog readiness, impediments closed fast, and delivery health leaders could act on. At iosting I am experimenting with Agile × AI × DevOps and agentic tools such as GitHub Copilot and Claude Code, so speed does not become shallow shipping. I coach Azure DevOps hygiene, run operational 1:1s on blockers and capacity, and line AI PoCs up with a cadence the team can actually support.

I hold a Belgian residence A card. With a permit transfer I can start the assignment. I would welcome a conversation about how I can help Itineris make this way of working self-sustaining.

Yours sincerely,

Anjish Bhondwe
