Re: Autonomous Delivery Teams Manager (Requisition 4414)

Dear IBA Hiring Team,

I am applying for the Autonomous Delivery Teams Manager role on the Imaging System team. I am very interested in working with IBA in healthcare because your work extends into cancer treatment and improves patients' lives in a concrete way. That mission matters to me more than another generic delivery role.

I spoke with IBA before about an Agile Coach / Delivery position. We did not land on the same expectations then, so I stepped back. This role is closer to what I actually do well: people leadership of a multidisciplinary team, reliable delivery through capacity and planning, and Agile maturity built with Product Owners, Scrum Masters and technical stakeholders, not process for its own sake.

At KBC in Brussels and Leuven I led people across EMEA squads and trains: hiring, performance, capacity and the day-to-day arbitration when priorities competed. Earlier, at HealthRFID in Geelong, I worked as Business Analyst / Product Owner on regulated health-technology products, translating clinical and operational needs into backlog and delivery plans. That mix is what I would bring to Proton Therapy R&D.

I am based in Belgium and available for Louvain-la-Neuve. I would welcome a fresh conversation about how I can help build a sustainable Imaging System team.

Yours sincerely,

Anjish Bhondwe
